

You are invited to a pre-recorded CAPHO Symposium

Advancing Care in Platinum-Resistant Ovarian Cancer:

Integrating ADCs and Multidisciplinary Practice

Presenter

Lisa Rambout

Pharmacist Team Leader, Oncology Pharmacy, The Ottawa Hospital

This presentation explores the evolving therapeutic landscape of platinum-resistant ovarian cancer (PROC), with a focus on antibody–drug conjugates (ADCs) and targeted therapies. It highlights the pharmacist’s integral role within the multidisciplinary care team, offering practical strategies for administering ADCs, as well as the monitoring and management of associated adverse events. Attendees will also gain insights into implementing effective workflows to optimize toxicity mitigation, enhance patient education, and improve overall treatment outcomes in PROC within contemporary oncology practice.

Learning objectives:

- 01 Describing the evolving landscape of PROC, including therapeutic mechanisms and indications for targeted therapies and ADCs
- 02 Valuing the pharmacist’s role as an integral member of the multidisciplinary care team, including proactive patient-centered interventions, collaboration, communication, and advocacy for molecular testing and safety monitoring
- 03 Applying best practices in administering, monitoring, and managing adverse events associated with ADCs and targeted agents, as well as implementing effective multidisciplinary workflows for toxicity mitigation and patient education

Delegates must be registered to the CAPHO conference to participate.

Available from April 23-26, 2026
