Centre Hospitalier Universitaire
de Québec
Québec City, QC

MELISSA LO

Pharm.D RPh
Clinical Pharmacist, Outpatient
Malignant Hematology/Bone Marrow
Transplant - UHN
Toronto, ON

OVERVIEW

This symposium will aim to empower Canadian pharmacists with clinical insights and practical strategies to help optimize patient care throughout the Multiple Myeloma treatment journey, across the NDMM patient spectrum and at first relapse and beyond.

LEARNING OBJECTIVES

This symposium aims to:

- Tailor the use of anti-CD38 containing regimens across the spectrum of Newly Diagnosed Multiple Myeloma (NDMM) to optimize long-term outcomes
- Identify strategies to strengthen the coordination of patient care between CAR-T and referral centers
- Integrate real-world evidence related to bispecific antibody dosing and administration into outpatient practice protocols
